Capital Improvement Program - Overview - City of Columbia, Missouri FY 2019

What is a Capital Improvement Program?

The City of Columbia's Capital Improvement Program (CIP) is a multi-year plan for capital investments in the City's infrastructure, facilities, and equipment. It is designed to address the challenges of supporting future infrastructure needs, while also addressing the City's current facility requirements. It includes items such as roads, bridges, sidewalks, public utilities, drainage projects, recreational facilities, building, and equipment. A CIP is important because it connects city development, comprehensive plans and financial plans. Projects within the CIP are intended to reflect the community's values and goals, and also the overall policy goals of the City Council, including existing city-wide long range plans.

Columbia's City Charter provides policy for the Manager to follow in developing a CIP:

"The City Manager shall also secure an estimate of all capital projects pending and those which it is recommended should be undertaken (a) within the budget year, and (b) within the next five (5) succeeding years. In preparing the budget, the city manager shall review and may revise the estimates, as the manager may deem necessary."

Article 5. Section 35.

The City of Columbia's master plans are the basis for the CIP. Columbia has several master plans designed to reflect the long-term needs and goals of each department. These plans are formulated to establish long term development plans that reflect Council policies. These long term plans are periodically revised and updated to reflect the City's changing needs. The CIP is meant to contain projects that fulfill these long-term needs and goals.

City of Columbia Master Plans

- Community Development Department Master Plans
 - Sidewalks
 - o Bicycles
 - o Columbia Imagined: The Plan for How We Live and Grown
 - 2040 Long Range Transportation Plan
 - Metro Greenbelt/Trails
 - CATSO Major Roadway Plan and Transportation Improvement Plan
- Fire Master Plan
- Airport Master Plan
- Parks and Recreation Master Plan
- Transit: Long Range Plan, Para-Transit, CBD
- Sewer Master Plan
- Water and Light
 - Electrical distribution
 - Water distribution
 - Water system
- OLT (Railroad)
- Downtown Columbia Charrette Report (2010)

The CIP manual is intended as a communication device, giving the public an opportunity to view the City's proposed plans for capital investment as well as providing the necessary link for offering feedback to the City Council and the City staff.

How is the CIP manual organized?

The CIP offers detailed information on the cost and timing of planned projects to be undertaken by the City and is organized into two major sections described below:

<u>General</u> <u>Government</u> <u>Capital</u> <u>Projects</u>: These are projects such as sidewalks, streets, parks, public safety and general government facilities.

<u>Enterprise</u> <u>Capital Projects:</u> These are projects funded primarily through revenues generated by enterprise funds such as electric, water, railroad, sewer, storm water, transit, and airport.

Each section contains a summary page displaying information for every project by timeframe - current, 1-2 years, 3-5 years, 6-10 years and 10+ years. This summary page also shows estimated project cost, funding in place, additional funding needed, and anticipated design and construction dates. Following the summary page is a detail page for each project. This provides additional, more specific information, including a location map when appropriate.

How is the CIP developed?

The CIP begins as a planning document, which gives the City an opportunity to prioritize and coordinate existing and future capital project needs. It is prepared under the direction of the City Manager with the assistance of the Planning and Finance Departments. The City staff review of capital projects has proven to be almost a year-round process, with all city departments continually reexamining and prioritizing their capital needs. However, the capital financing process is most involved from January through May each year. During this period City staff is responsible for compiling project needs, reviewing cost estimates, identifying financing options and planning a program schedule. Meetings are scheduled with each department to review, add, modify and prioritize all project requests. The CIP is first reviewed by the Planning and Zoning Commission to focus on identifying projects and capital needs that were not represented, followed by City Council review to propose any changes in project priorities. Following approval from the Council, it then becomes a financial document so the City can determine capital projects that are within its current and future fiscal capacity. A summary of the CIP process is provided below.

Schedule	Task
January	Projects are discussed within departments
February	Project priorities are discussed between departments and City administration
March	Final project requests are submitted by departments
March/April	Requests are compiled into a CIP document. Preliminary CIP is compiled and is reviewed by City Manager. CIP is also reviewed by the Planning & Zoning Commission.
May/June	Council reviews and approves the CIP and the CIP document is made in final draft form. CIP then becomes a basis for what to include in budget.
July	Public hearing is held on the CIP. A five year CIP, with funding needs, is presented to

	Council with budget document and the public is given the opportunity to comment.
August	Budget hearings are held. The public has additional opportunities to comment.
September	Budget hearing incorporating final revisions and adoption of yearly CIP with approved adjustments. Revised CIP document is prepared to reflect any changes made during the budget process.

Deciding which CIP projects to move forward and determining project timing are both very important to serving the needs of the City of Columbia. During the initial stages of the annual CIP process, departments prioritize CIP project requests based on six different categories ranging from Urgent to Deferrable. Using common criteria for determining and prioritizing CIP projects is critical to formulating long-term and short-term plans that reflect the City's values and goals.

Various citizen committees may be formed and appointed by the Council to evaluate projects to be funded through proposed ballot issues. A recent example was the committee formed to assist with passage of the Transportation Sales Tax issue approved by voters in November 2005, which included a list of priority projects to be funded by this tax as part of the CIP.

How are projects in the CIP funded?

The City of Columbia Finance Department evaluates the City's ability to pay for proposed capital projects. This is accomplished by reviewing past revenue and expenditure trends, as well as forecasting future revenues and expenditures for the course of the CIP period. The purpose of this process is to determine the amount of revenue, reserves, and fund balances available from existing sources to pay for capital investments to meet community needs. Following is a list of funding sources for City of Columbia CIP.

Capital Improvement Sales Tax

The City of Columbia uses the Capital Improvement Sales Tax to meet capital needs for Public Safety and Transportation. This is a temporary one-quarter cent (0.250%) sales tax which was first approved in 1991 and must be approved by voters to be extended. In August, 2015 voters approved the extension of the sales tax which will expire on December 31, 2025.

Parks Sales Tax

Columbia voters approved a one-quarter cent (0.250%) Parks Sales Tax in April, 2000. Half of this tax, or one-eighth cent (0.125%), is a permanent tax to support operational costs as well as limited capital projects. The remaining one-eighth cent is temporary and must be presented to the voters to be extended. This temporary portion has been used for capital projects, including construction of new parks and trails. The current one-eighth temporary tax was extended by voters in November 2015, for six years, and will expire March 30, 2022.

Development Charges

When a building permit is issued for new construction, the City of Columbia assesses a fee, currently \$0.50 per square foot. Revenue from this fee is used for construction of collector and arterial streets.

County Revenue

This revenue originates with Boone County's one-half cent (0.500%) sales tax for road and bridge maintenance. Boone County has agreed to share a portion of the revenue with local municipalities. The City of

Columbia utilizes this funding source to improve, maintain, construct and repair city streets and roads. This County tax was renewed by voters in 2017 for a 10 year period, and expires in 2028.

Transportation Sales Tax Fund

This fund accounts for the City's one-half cent (0.500%) sales tax used to fund transportation-related projects. Examples include the public mass transportation system, construction and maintenance of streets, roads, bridges and airports, to the extent of tax revenues.

Designated Loan Fund

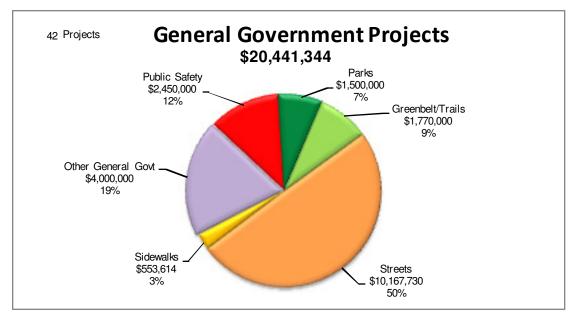

This fund includes monies set aside to provide loans to various Enterprise and Internal Service Funds.

Public Improvement Fund

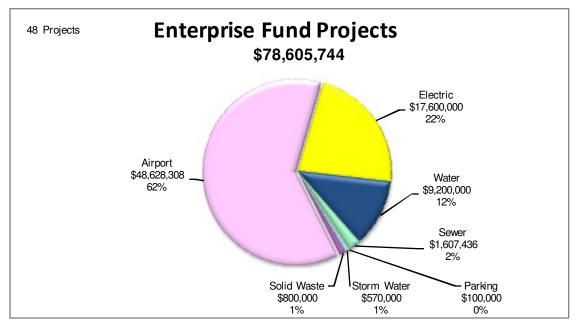

This fund accounts for a portion (4.1%) of the City's one cent (1.000%) sales tax for General Revenue and is allocated for a wide range of public improvements to the City, including streets, sidewalks and parks.

Bond Funds

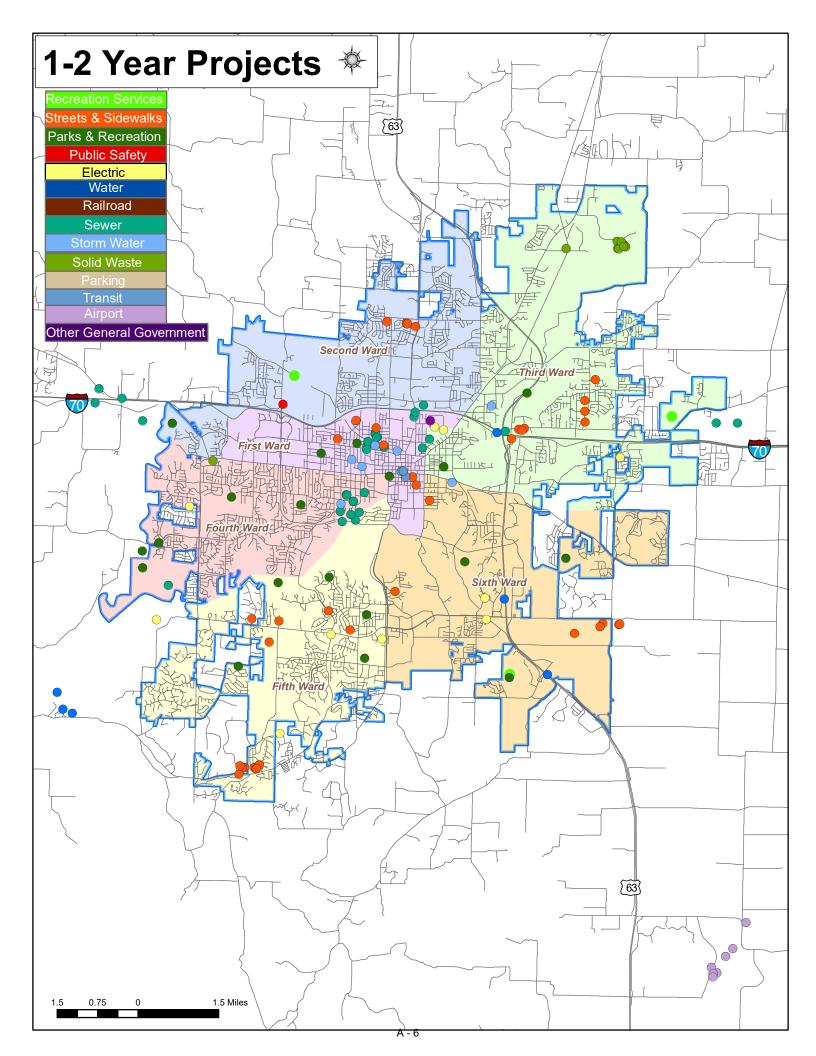

Utility funds (Water, Electric and Sewer) may obtain voter approval for bond issues to help finance their capital project needs.

	# of Projects	Current Funding Request
Streets	13	\$10,167,730

General Government Capital Projects

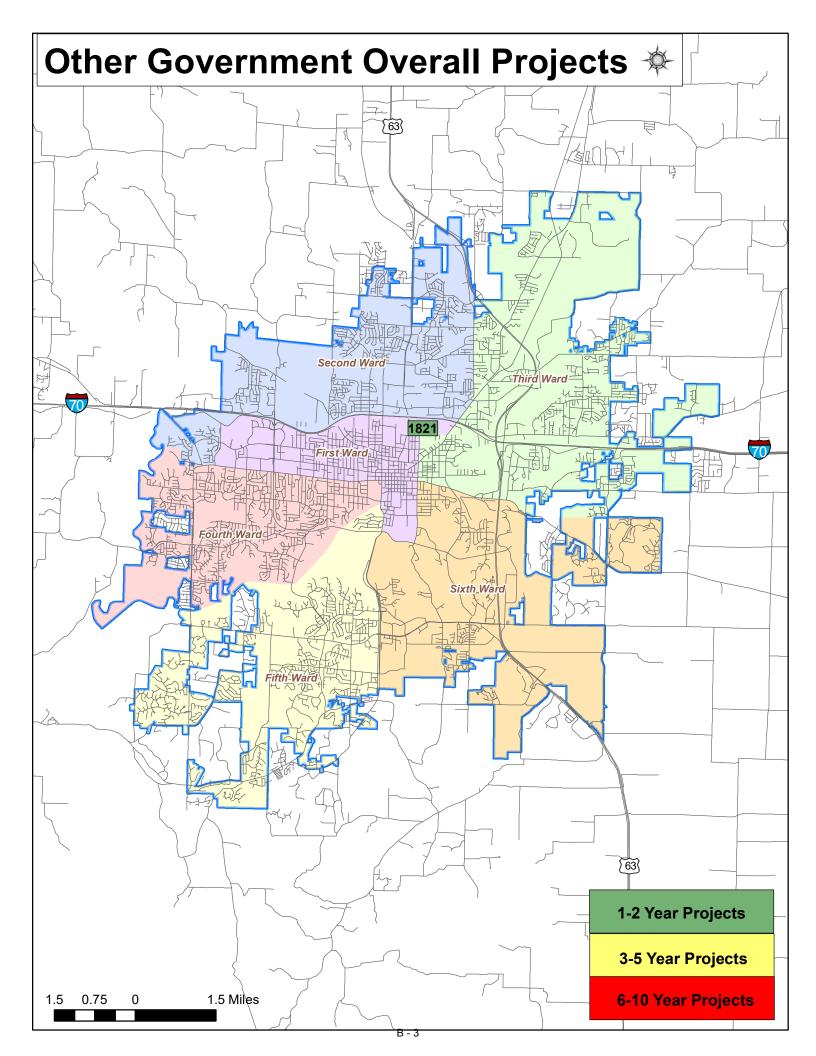

Planning

Long term capital planning for General Government needs includes capital projects for public facilities and other community-related capital projects the City chooses to support. Examples include community-based capital projects in the City's central business area. The City has worked closely with Special Business District and other groups to provide funding for improvements to the central business area of the City. Capital contingency funds are also budgeted in this section.

Funding

The City primarily uses local funding sources to meet its capital improvement needs for Genera Government projects. However grant funds are utilized whenever possible. A limited amount of funding is provided by allocating 4.1% of the City's 1% General Revenue sales tax to capital needs. This allocation percentage has varied over the years as operational needs continue to grow. Also, the City continues to transfer \$700,000 annually from General Fund property taxes to support public building projects until the special obligation bond is fully paid.

Parks and Recreation Capital Projects

Planning

Long term capital planning in the Parks and Recreation Department takes place for two categories of capital projects; parks and trails. Staff uses master plans, the recommendations of the Parks and Recreation Commission, and public input to assist in the planning process. In addition to the large easily identifiable projects, staff has established a generic "annual needs" program which provides funding for projects that are desirable, necessary, and meet needs identified in a master plan, although a specific project may not be identified at this point in time. These annual funds are often utilized as the City's matching funds for various state and federal grants.

The long-term capital plan is guided by the 2013 Comprehensive Parks, Recreation and Open Space Master Plan. This ten-year planning document is the result of extensive public input, numerous public and focus group meetings to ascertain citizens' recreation facility needs and the results of two city wide surveys. Public hearings were held by both the Parks and Recreation Commission and the City Council prior to their adoption of the Master Plan in October 2013.

The long term capital plan for trails and greenbelts is derived from both the Metro Greenbelt/Trails Plan and the 2013 Comprehensive Parks, Recreation and Open Space Master Plan. Public input played a key role in the development of the recommendations made in both of these planning documents. Public hearings were held by the Park and Recreation Commission, the Planning and Zoning Commission, and City Council as part of the approval process of the Metro Greenbelt/Trails Plan.

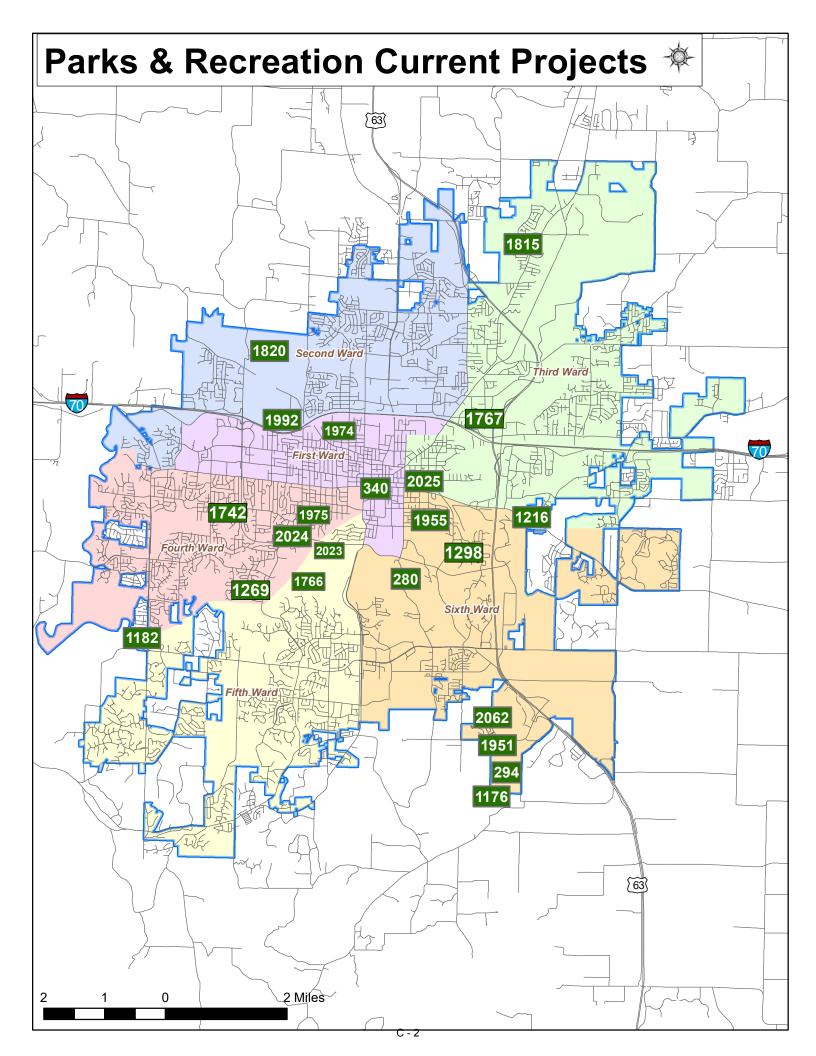

Parks and Recreation staff periodically reviews the condition of the various facilities used to provide recreation programs and services. Citizens also provide feedback on needed improvements and/or enhancements to these facilities. The capital plan for these facilities is developed using such input, as well as guidance from the Parks, Recreation and Open Space Master Plan.

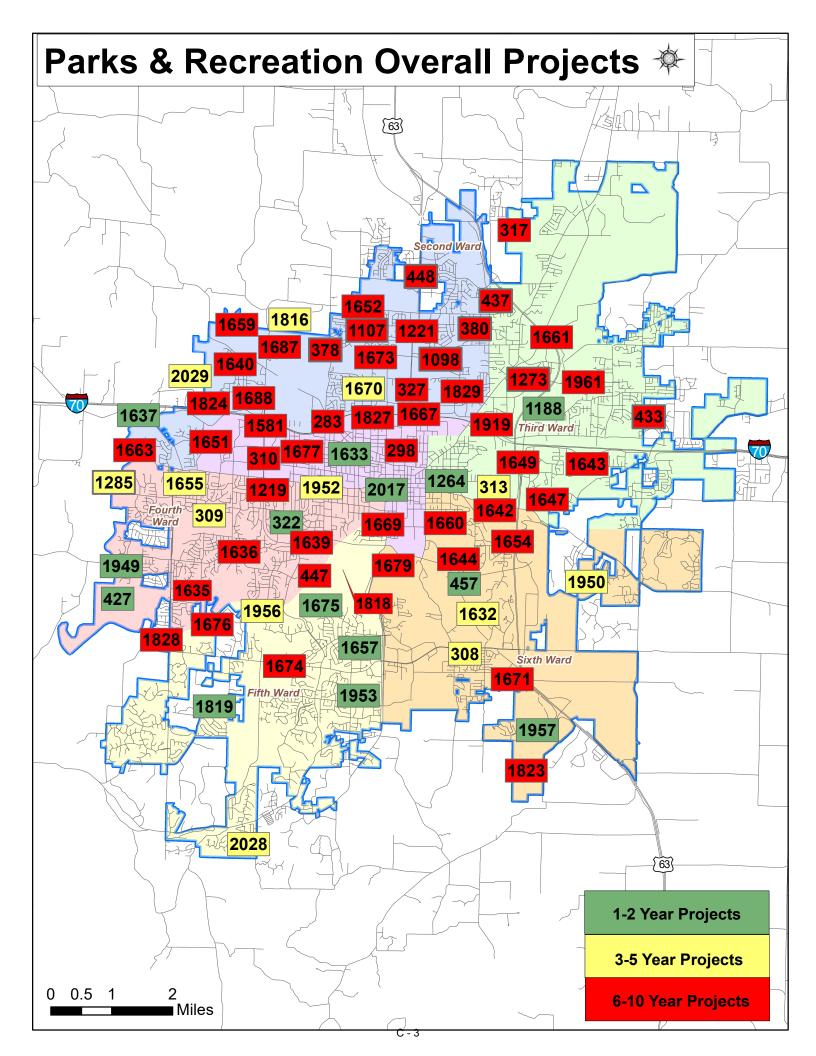

Funding

Parks and Recreation capital projects are primarily funded with a temporary one-eighth cent park sales tax. This tax was first effective in April 2001 and was extended by voters through ballots held in 2005, 2010, and 2015. The current tax was approved by voters for a six-year extension and will expire March 31, 2022. This tax is the primary funding source for the department's capital improvement program.

After extensive public and user group input, staff recommends to Council a list of projects from the CIP for consideration of funding by the park sales tax. These projects are tied to the ballot issue via legislation and commits the projects for completion pending renewal of the park sales tax. Projects that are currently listed in the CIP as "unfunded" are potential projects to be funded by the next park sales tax ballot issue.

Staff is continuously searching for funding opportunities through various grants and donations. Grants have also provided significant funding for the parks and trail system in Columbia.

Recreation Services Capital Projects

Planning

Long term capital planning takes place for recreation facilities. Staff uses master plans, the recommendations of the Parks and Recreation Commission, and public input to assist in the planning process.

The long-term capital plan is guided by the 2013 Comprehensive Parks, Recreation and Open Space Master Plan. This ten-year planning document is the result of extensive public input, numerous public and focus group meetings to ascertain citizens' recreation facility needs and the results of two city wide surveys. Public hearings were held by both the Parks and Recreation Commission and the City Council prior to their adoption of the Master Plan in October 2013.

Parks and Recreation staff periodically reviews the condition of the various facilities used to provide recreation programs and services. Citizens also provide feedback on needed improvements and/or enhancements to these facilities. The capital plan for these facilities is developed using such input, as well as guidance from the Parks, Recreation and Open Space Master Plan.

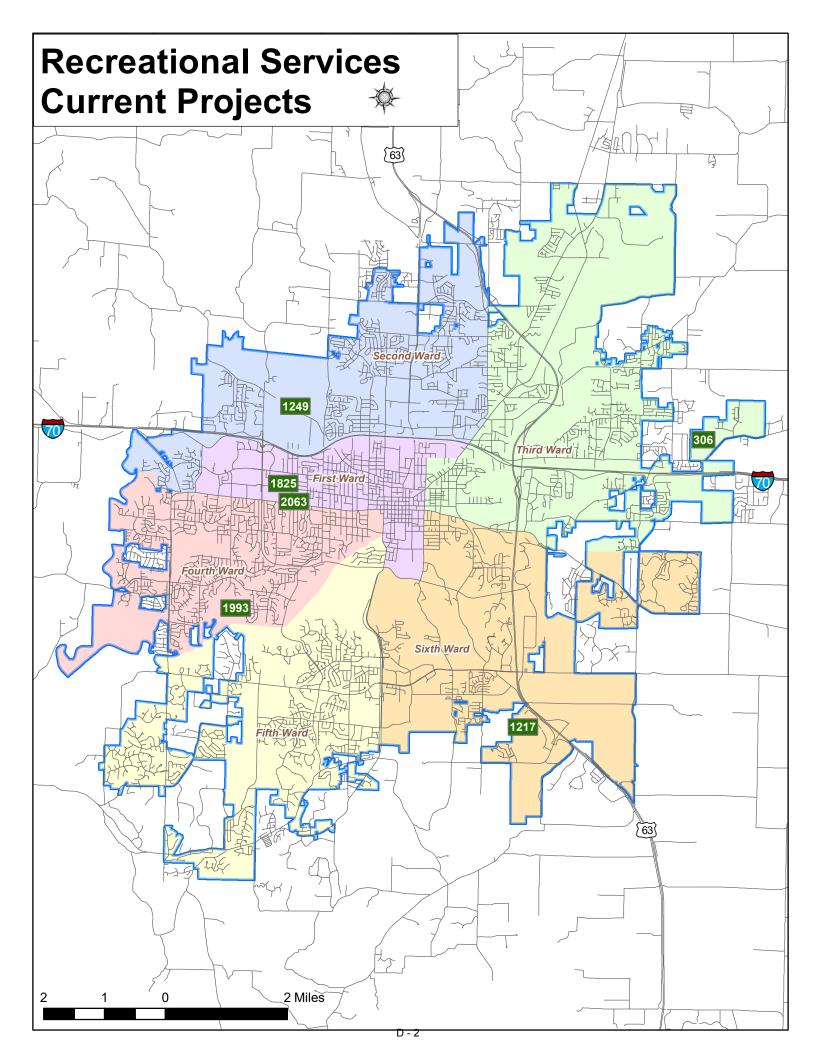

Funding

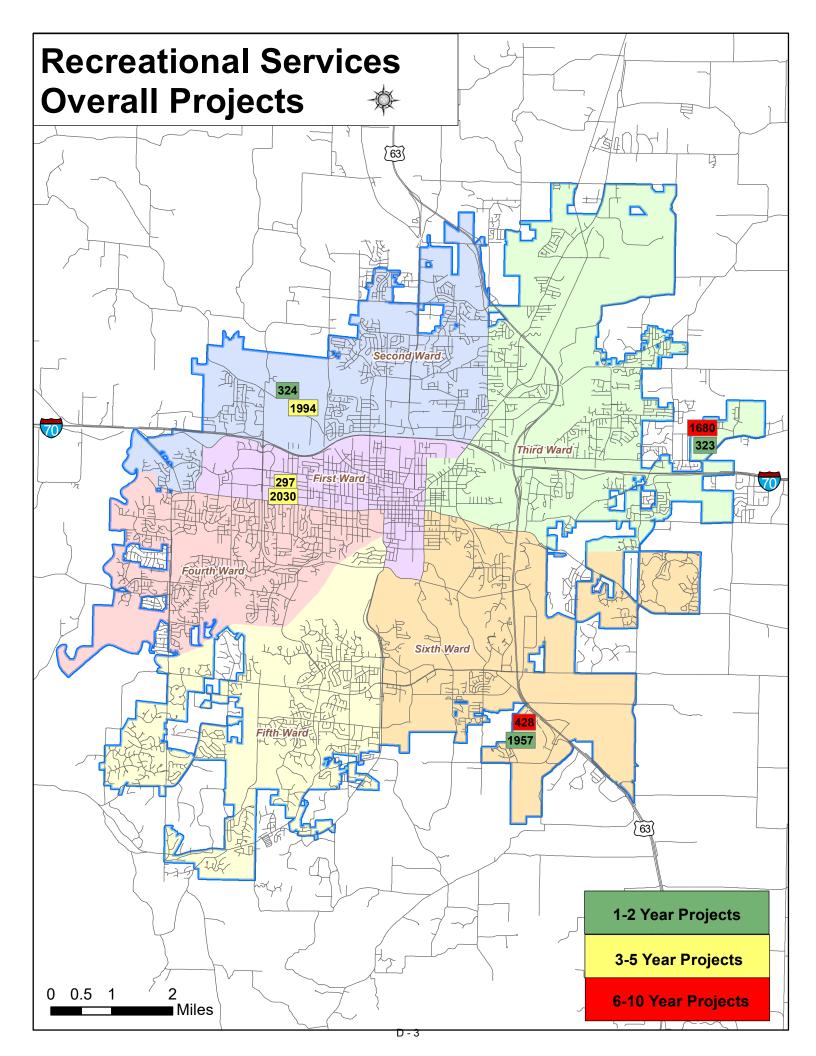

Parks and Recreation capital projects are primarily funded with a temporary one-eighth cent park sales tax. This tax was first effective in April 2001 and was extended by voters through ballots held in 2005, 2010, and 2015. The current tax was approved by voters for a six-year extension and will expire March 31, 2022. This tax is the primary funding source for the department's capital improvement program.

After extensive public and user group input, staff recommends to Council a list of projects from the CIP for consideration of funding by the park sales tax. These projects are tied to the ballot issue via legislation and commits the projects for completion pending renewal of the park sales tax. Projects that are currently listed in the CIP as "unfunded" are potential projects to be funded by the next park sales tax ballot issue.

Another CIP funding source is the Recreation Services User Fees. A portion of fees paid by park users are set aside to provide funding for capital projects at recreational facilities. Additionally, fees charged at the City's two golf courses and the Activity & Recreation Center (ARC) may only be used for those facilities.

Staff is continuously searching for funding opportunities through various grants and donations.

Public Safety Capital Projects

Planning

Long term capital planning for Public Safety needs include capital projects for fire stations, major fire equipment and police facilities.

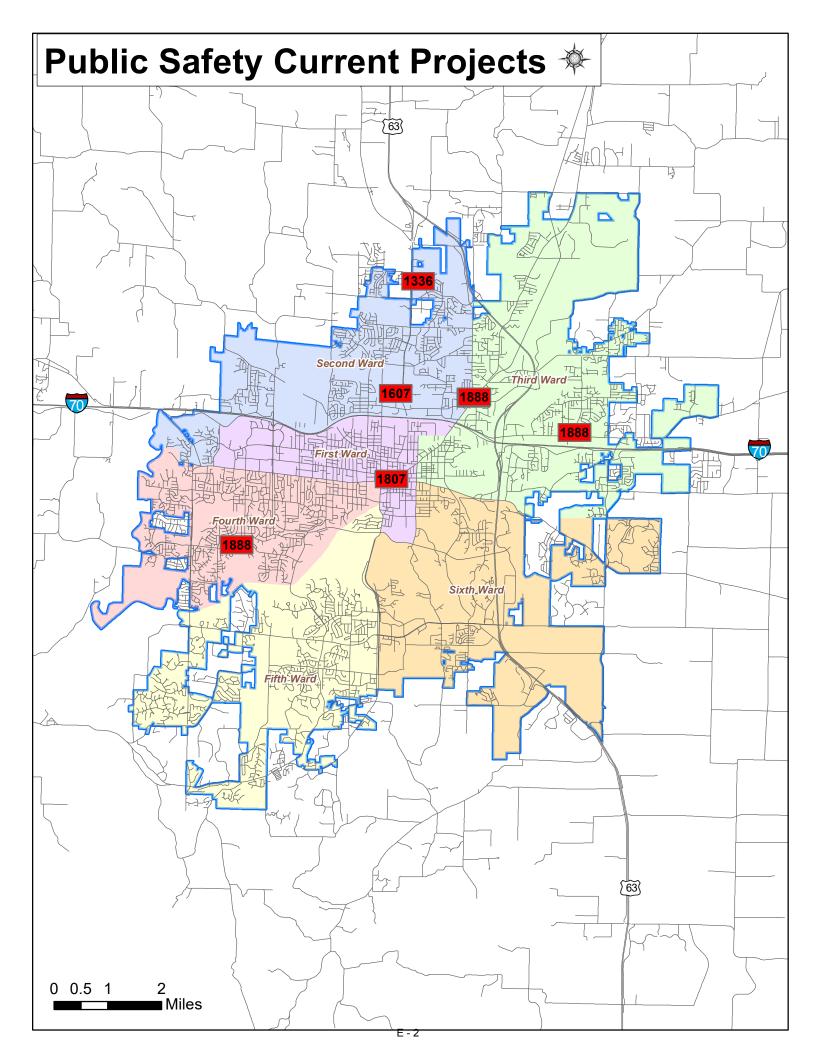

Columbia Fire Department utilizes a fire station location master plan and a vehicle replacement master plan to assist in identifying capital improvement projects. Projects are identified and selected using a cost-benefit analysis. Consideration in the analysis is given to, but not limited to, concerns such as response times, loss prevention, current response trends, and apparatus requirements. Staff presents cost – benefit analysis reports to Mayor and Council for policy decisions and direction. The proposed replacement schedule will allow the City to get closer to its ultimate goal of having major apparatus on a replacement schedule that includes 8 years on the front line and 4 years in reserve.

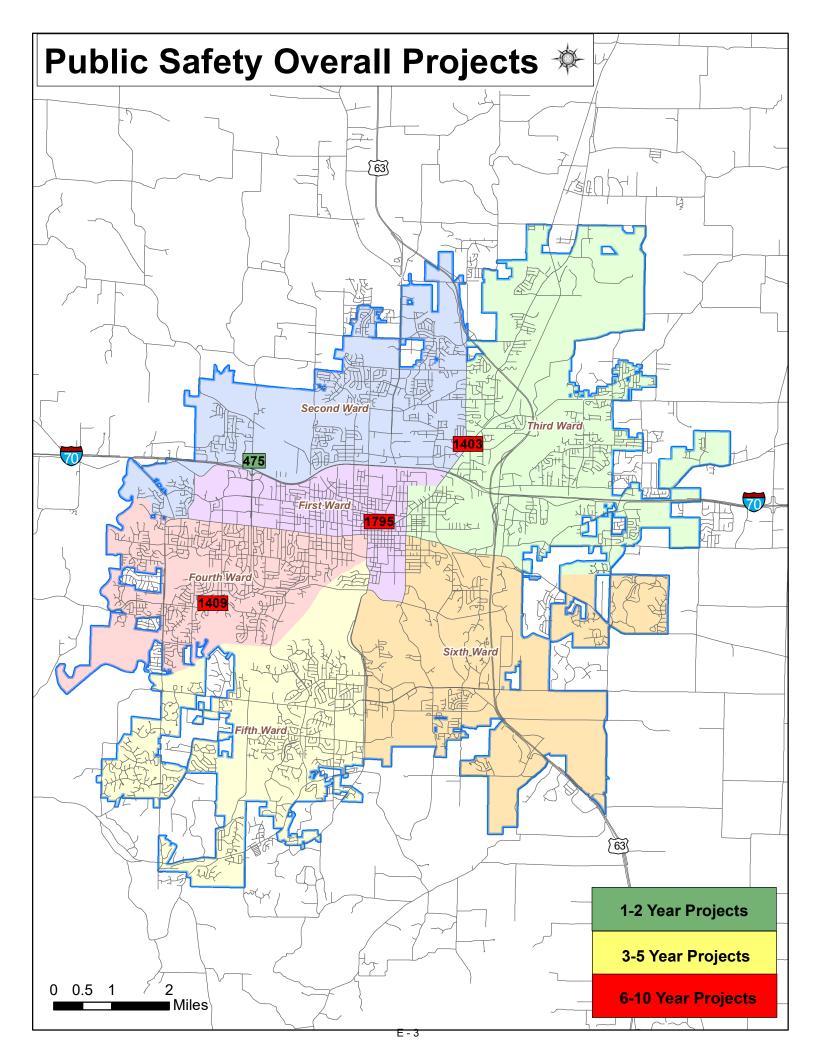

Since most of the vehicles and equipment in the Police Department are included in the annual operating budget, the primary long term capital need is for facilities. Recently the city hired a consultant to do a needs assessment for the current and future police facilities. During that process, it was determined that there is a significant need for larger and improved police facilities. Facilities have been included in the 1-2 year, 3-5 year and 6-10 year plan.

Funding

The city utilizes primarily local funding sources to meet its capital improvement needs for public safety; however grant funds are utilized whenever possible.

Sales taxes from the Capital Improvement Sales Tax make up a substantial amount of funding for the public safety. In 1991, 1995, 1999, 2005 and 2015 Columbia voters extended the ¼ Cent Capital Improvement Sales Tax ballot issues that included listings of specific projects to be funded with this tax. The current tax expires in December 2025. A limited amount of funding is provided by the allocation of the city's general sales tax to capital needs. Currently 4.1% of the general sales tax is allocated to the capital plan. This amount has varied over the years as operational needs continue to grow.

Streets and Sidewalks Capital Projects

Planning

Long term capital planning for Transportation needs takes place for three categories of capital projects: streets, sidewalks and major maintenance. City staff, primarily in the Public Works and Community Development Departments, work with a number of committees to develop comprehensive plans for the City's long-term capital transportation plan. In addition, staff has identified "annual needs" to provide funding for projects that are desirable or necessary to complete because they meet needs identified in a master plan, but the specific project may not be identified at this point in time.

The long term capital plan for streets is determined through the CATSO Major Roadway Plan and the 2040 Long Range Transportation Plan. This plan is used to identify the major roadway classifications in the Columbia metro area. Recommended changes to the plan go through a Policy committee, Technical committee and a public hearing process before being approved. Individual projects are identified from anticipated development patterns, current development and annexations. Smaller street projects are identified from problems with congestion, safety, and bringing older streets up to today's standards.

These projects start with an Interested Parties meeting that include adjacent property owners, businesses, home owners associations and the like; followed by a Public Hearing before the City Council about the details of the project; an ordinance to acquire easements; and a bid call ordinance also brought before Council.

The long term capital plan for sidewalks are determined by the 2040 Long Range Transportation Plan, Sidewalk Master Plan, Bicycle Master Plan and the report on Walkable Columbia. Individual projects are identified from discussions with the Bicycle/Pedestrian Commission, neighborhoods, homeowners association, citizens, and by the City Council. The public involvement process follows the same process as mentioned in the street portion above.

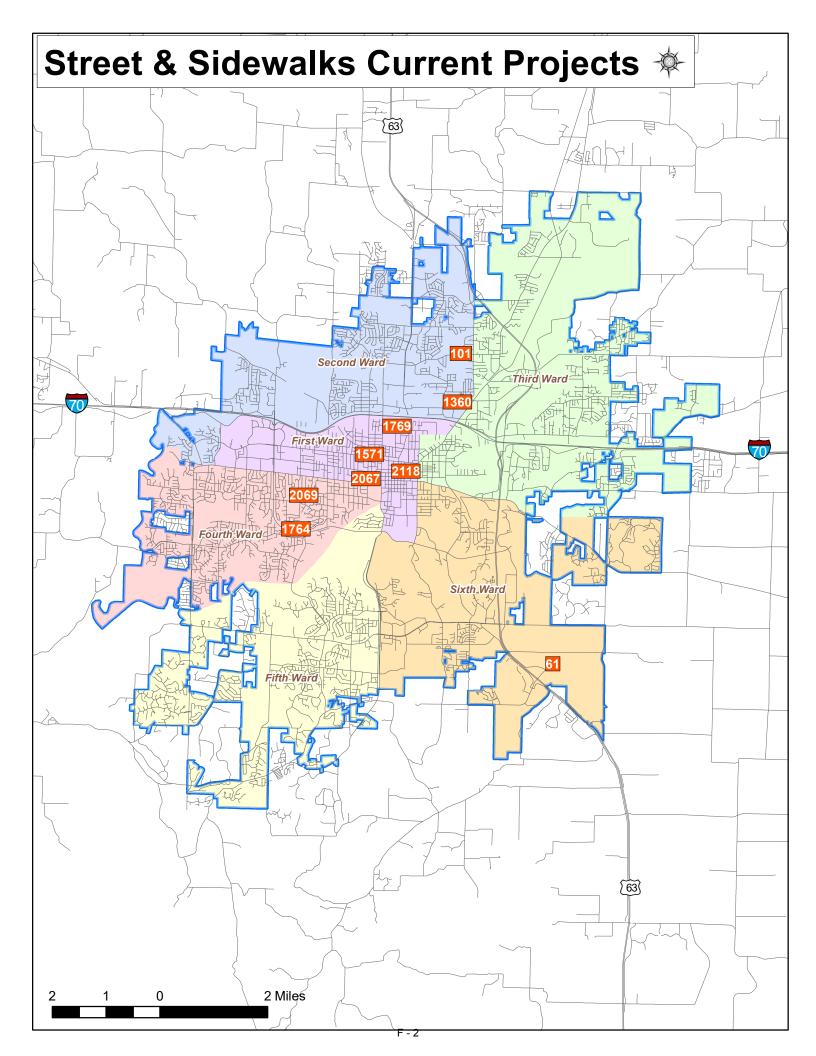

Funding

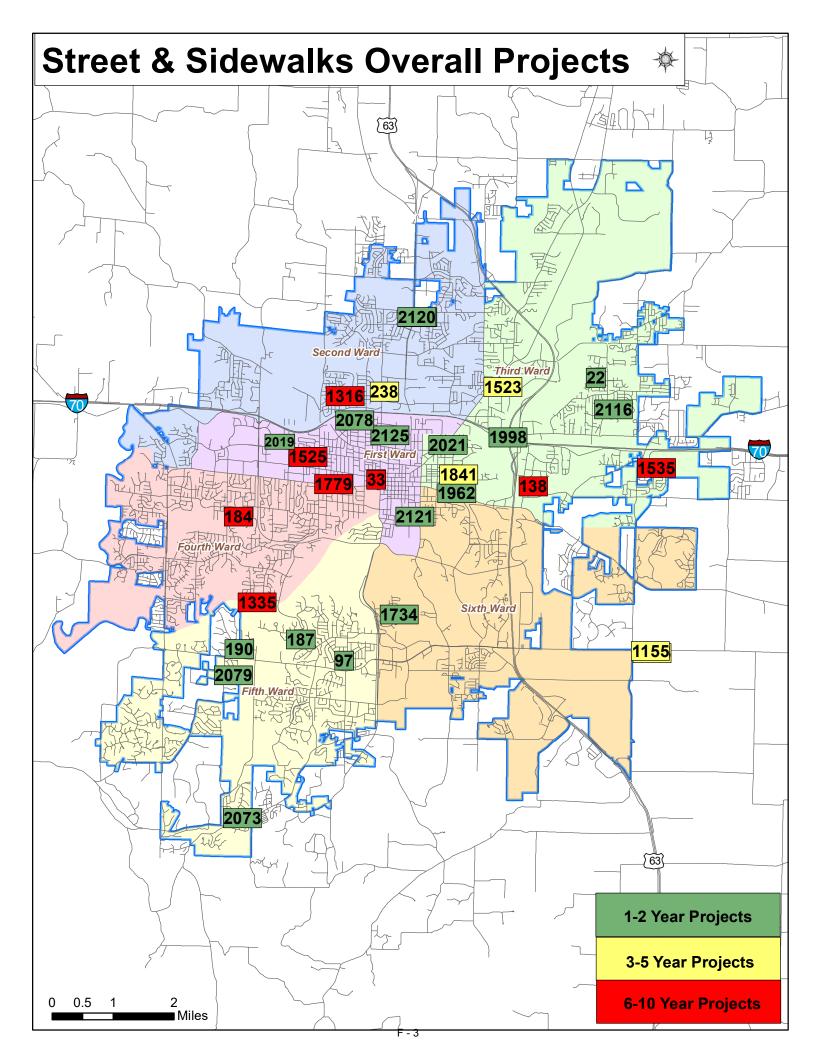

The city utilizes a variety of funding sources to meet its capital improvement needs for transportation. They include Transportation Sales Tax, County Road Rebate Tax, ¼ cent capital improvement sales tax, development charges, developer contributions, tax bills and various federal and state grants.

Sales taxes, in the form of the transportation sales tax and $\frac{1}{2}$ cent capital improvement sales tax, make up a substantial amount of funding for the transportation capital plan. The transportation sales tax is a $\frac{1}{2}$ cent permanent sales tax used for street construction and maintenance needs as well as subsidies and capital needs for the airport and bus system. The $\frac{1}{4}$ cent capital improvement sales tax is a temporary tax which is used to fund streets, sidewalks and public safety needs. A list of projects is presented to voters for their approval of the extension of the tax. In August, 2015 voters approved the extension of the sales tax which will expire in December, 2025.

GetAbout Columbia: In 2006, Columbia, Missouri was selected as one of four communities in the nation to participate in the Federal Highway Administration's Non-Motorized Transportation Pilot program. Columbia's designation as a pilot city came with \$22.4 million in federal funds to help build infrastructure and establish national standards for public awareness and willingness to use active modes of transportation. Facilities constructed include sidewalks, bicycle lanes and routes, intersection improvements, and multi-use paths and trails, that provide connectivity with transit stations, schools, residences, businesses, recreation areas, and other community activity centers.

In 2012, the Federal Highway Administration extended the highway bill to include an additional \$5.9 million to each of the four pilot communities. These funds are being used for additional projects as well as for new initiatives to increase bicycle parking and improve signage on trails.

Transit Capital Projects

Planning

The Capital Improvements Plan (CIP) budget is updated annually. The CIP is a multi-year plan for capital expansion and the replacement of aging facilities or equipment. As part of preparing the CIP, the transit system is evaluated for adequacy and replacement requirements. The Transportation Division transit staff develop recommendations for the CIP. These recommendations then go through a review process, including the Transit and Parking Manager, Director of Public Works, the City Manager, and finally the Columbia City Council.

Various evaluation tools are utilized to prepare recommendations outlined in the annual CIP. These include routine inspections performed by transit staff and fleet operations to evaluate existing infrastructure conditions, compliance with the Federal Transit Administration (FTA) Transit Asset Management System (TAMS) program, and evaluation of existing and projected operating practices.

In addition, an active preventive maintenance program is in place to identify problem areas that may require inclusion in the CIP. This program includes:

- 1. Monthly walk-through inspections of transit facilities
- 2. Periodic maintenance and services of transit fleet performed by fleet operations
- 3. Weekly fleet safety and serviceability inspection, performed by the Safety/Training Dispatcher
- 4. Daily pre-trip inspections performed by drivers.

Funding

Funding for the transportation CIP program is provided by a combination of transportation sales tax, enterprise revenue, and federal operating assistance from the Federal Transit Administration. Available capital grants are funded 80% from FTA and local shares are 20%.

During FY 2012-13, the Transit Division was one of many transit agencies throughout the country to receive federal funding under the State of Good Repair II program. The program provides funding to public transportation capital projects. The City of Columbia Transportation Division received \$2,047,644 from the Federal Transportation Administration (FTA) to purchase automatic vehicle locators, auto-enunciators, passenger counters and farebox upgrades for buses in existing fleet. In addition, two replacement heavy-duty CNG buses and six paratransit vans were purchased.

In FY 2017 the Transit Division was awarded a \$1.3 million competitive grant from the FTA under the "Low Emission No Emission" grant program. The grant will be used to purchase three 30 foot electric buses, upgrade electrical infrastructure, and fund a consultant to evaluate and make recommendations for the City's electric bus program. The Transit Division currently operates nine electric buses through lease-to-own agreements.

Airport Capital Projects

Planning

The Capital Improvements Plan (CIP) budget is updated annually. The CIP is a multi-year plan for capital expansion and the replacement of aging facilities. As part of preparing the CIP, airport runways, taxiways, aprons and all associated airfield infrastructure are evaluated for adequacy and replacement requirements. The airport staff and contract consulting engineers develop recommendations for the CIP based on the Airport Master Plan, existing infrastructure conditions and FAA or TSA requirements. These recommendations then go through a review process that includes the Director of Public Works, the Economic Development Director, the City Manager, and finally the Columbia City Council.

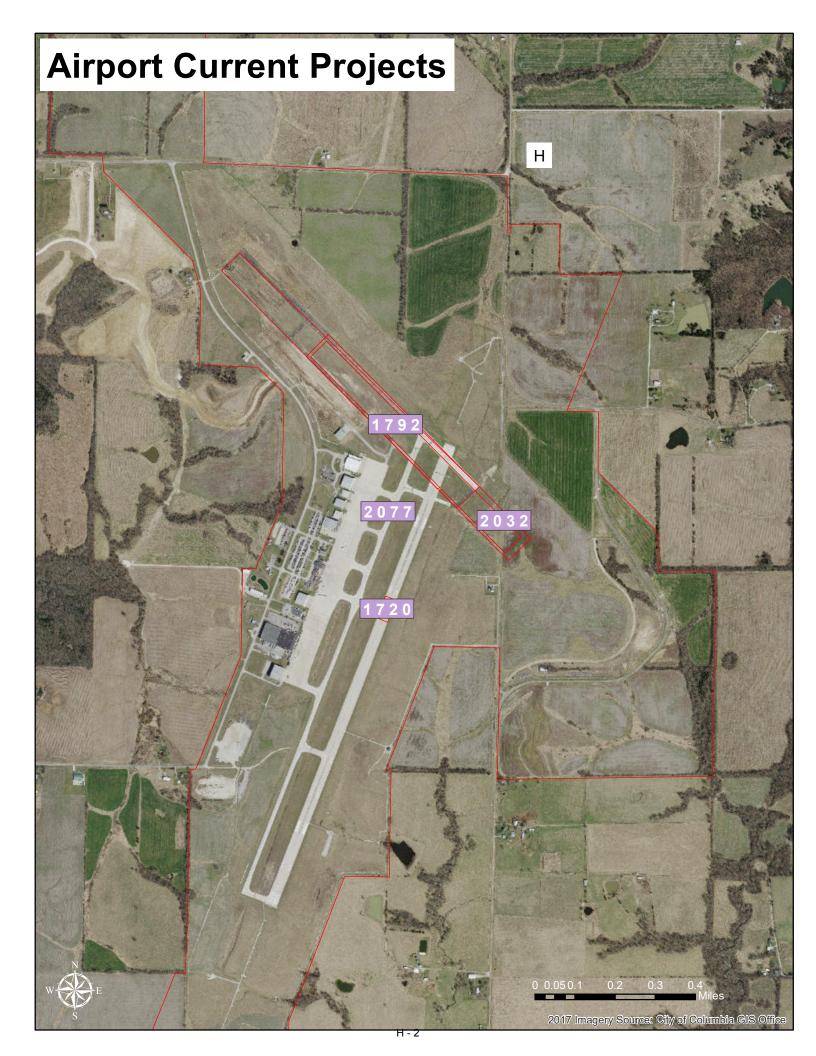

Various evaluation tools are utilized to prepare recommendations outlined in the annual CIP. These include routine inspections for evaluation and projection of future traffic quantities and types through master plan updates, and the evaluation of existing and projected operating practices.

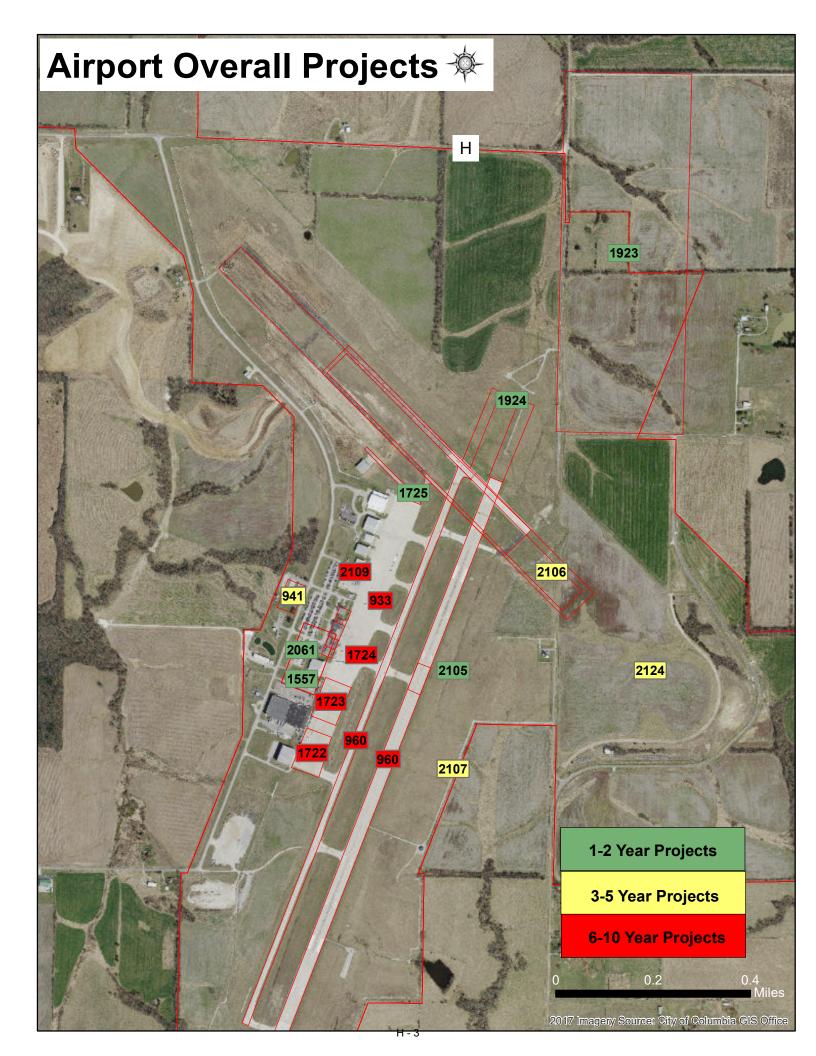

In addition, we have active safety, security and preventive maintenance programs in place to identify problem areas that may require inclusion in the CIP. These programs include:

- 1. Three daily inspections of all airfield areas by Airport Safety Officers
- 2. FAA issued CertAlerts and Advisory Circulars
- 3. Wildlife Hazard Management
- 4. TSA issued Airport Security Plan amendments
- 5. Monthly and annual inspections by Airport Maintenance personnel in compliance with the FAA-approved pavement maintenance plan
- 6. Periodic crack filling and sealing of all airfield paved areas in accordance with the pavement maintenance plan
- 7. Annual certification inspection by FAA officials
- 8. Annual compliance inspection by TSA officials

Funding

Funding for the airport CIP program is a combination of Federal Airport Improvement Program (AIP) grants and City of Columbia matching funds from various sources, including transportation sales tax revenues. This Federal funding covers 90% of qualifying project costs. For major runway projects, AIP discretionary funding may be available (also at 90%) for amounts greater than entitlement fund balances.

Parking Utility Capital Projects

Planning

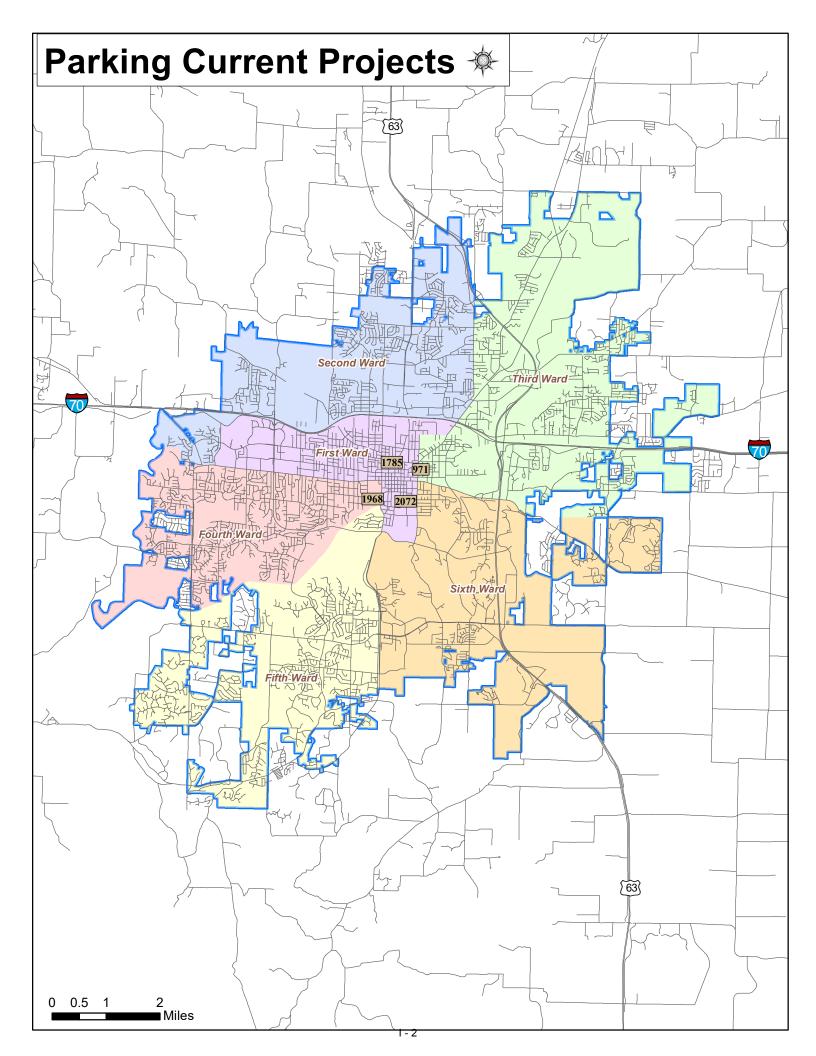

The Capital Improvements Plan (CIP) Budget is updated annually. The CIP is a multi-year plan for capital expansion and the replacement/repair of aging facilities. As part of preparing the CIP, the parking inventory is evaluated for adequacy, and/or maintenance upgrade requirements. The staff of the parking utility develops recommendations for the CIP after consultation with City, other Public Works staff and the Downtown Community Improvement District parking committee. Periodic use of professional consultation to perform a parking study is a major working tool for the Utility. These recommendations then go through a review process that includes the Director of Public Works, the City Manager, and finally the Columbia City Council.

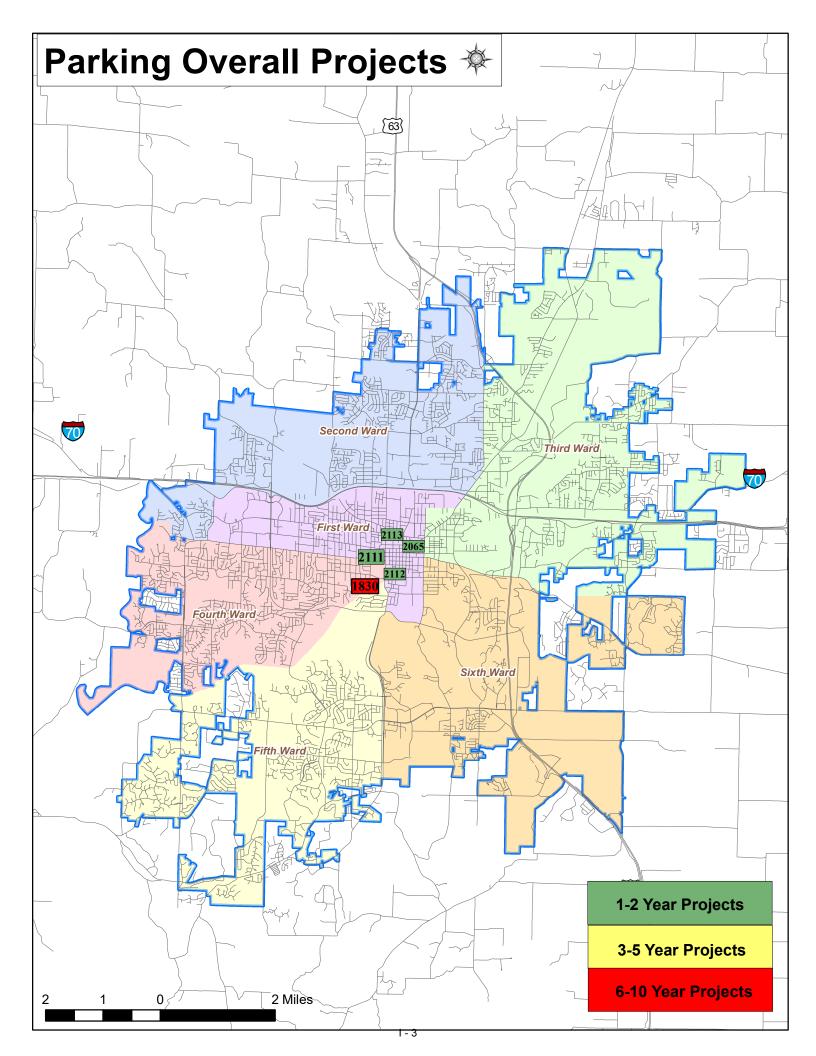

The inputs from all sources are utilized to make the recommendations outlined in the annual CIP. This includes evaluation of parking availability, evaluation of parking growth patterns and upgrade items that will increase customer convenience. Safety issues are continuously a part of the evaluation and include pedestrian traffic, egress issues, lighting, vehicular traffic and security. Communication for customer safety remains a major evaluation issue for the Utility, including ADA compliance throughout all parking areas.

Funding

Funding for the CIP program is Parking Utility Enterprise revenue. In general, since the Parking Utility is required to be self sufficient, then funding would need to come entirely from its enterprise revenues.

A master plan should be developed for the Parking Utility to utilize the entire city and not be restricted to the downtown area. A master plan will provide direction for the future of the utility.

Railroad Capital Projects

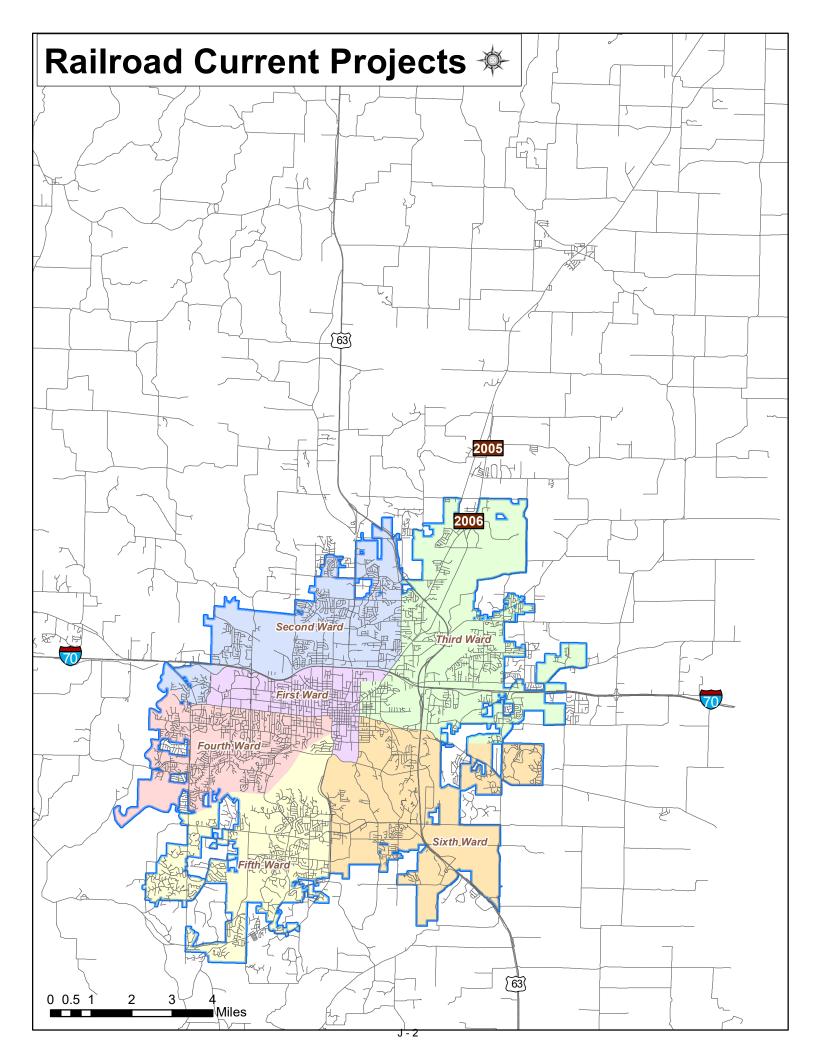

Planning

The Capital Improvements Plan (CIP) Budget is updated annually. The CIP is a multi-year plan for capital expansion and replacement of aging facilities and infrastructure. As part of preparing the CIP, the short line railroad is evaluated for adequacy and replacement requirements. The railroad engineering staff develops recommendations for the CIP based on the condition of existing infrastructure, other public projects impacting the railroad, railroad traffic conditions, railroad customer requirements, and railroad operating requirements. These recommendations then go through a review process including the Director of Water & Light, the City Manager, the Railroad Advisory Board (a citizen advisory board), and finally the Columbia City Council.

Various evaluation tools are utilized to make recommendations outlined in the annual CIP. These include evaluation of existing infrastructure condition through routine inspections, review of maintenance records, evaluation and projection of future traffic quantities and types, evaluation of existing and projected operating practices, and use of detailed analytical models to predict failure rates and asset lives.

Funding

Funding for the railroad CIP program comes from enterprise revenues.

Water Capital Projects

Planning

The Capital Improvements Plan (CIP) Budget is updated annually. The CIP is a multi-year plan for capital expansion and replacement of aging facilities and infrastructure. As part of preparing the CIP, the water system is evaluated for adequacy and replacement requirements. The water utility engineering staff develops recommendations for the CIP after consultation with the water distribution and water production staff. These recommendations then go through a review process including the Director of Water & Light, the City Manager, the Columbia Water & Light Advisory Board (a citizen advisory board), and finally the Columbia City Council.

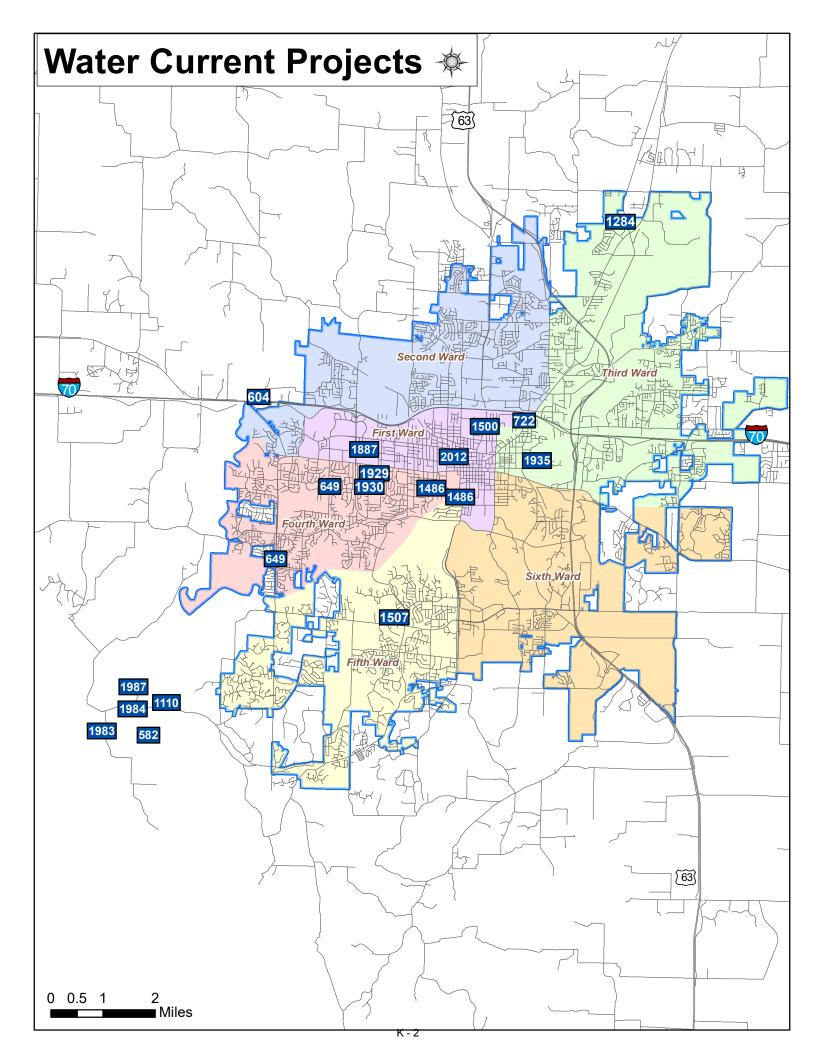

Various evaluation tools are utilized to make the recommendations outlined in the annual CIP. These include evaluation of fire flows and system pressure; evaluation of customer growth patterns; communication with inter-connected systems; and the evaluation of needs to upgrade smaller size lines and/or replace older lines due to a history of breaks.

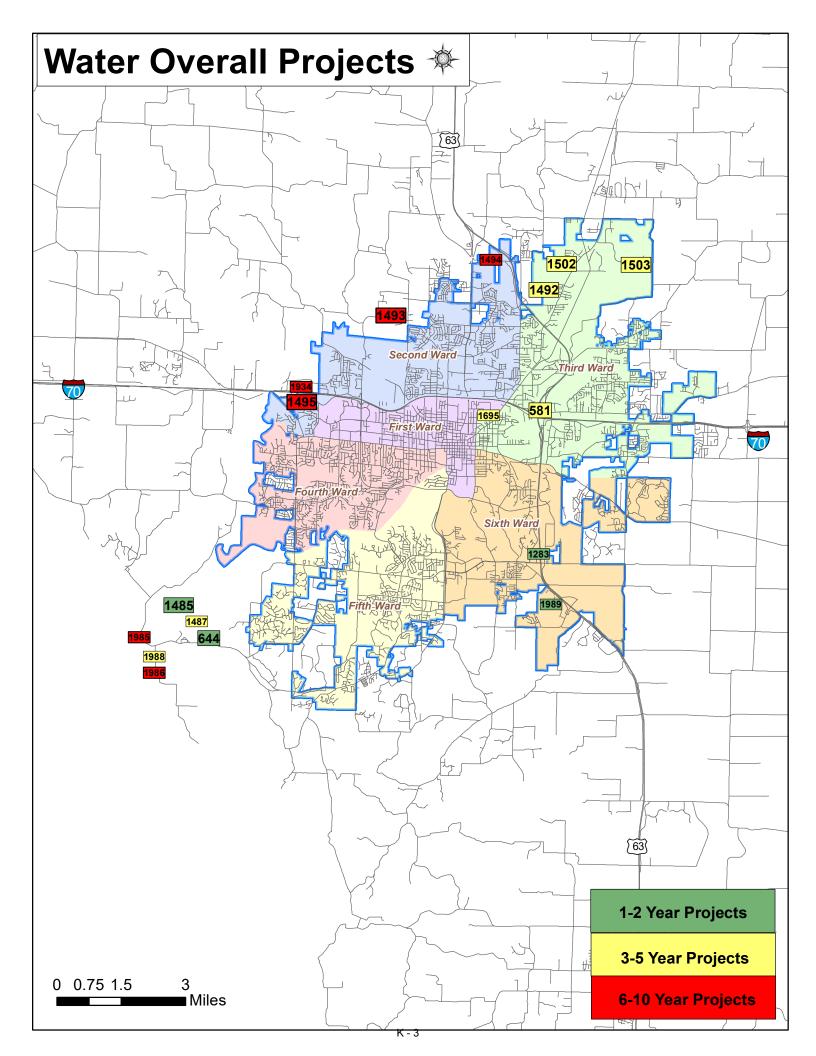

In addition, an active preventive maintenance program is in place to identify problem areas that may require inclusion in the CIP. This program includes:

- 1.) Formal monthly inspections of pump stations and storage facilities.
- 2.) Annual flushing and testing of distribution systems.
- 3.) Sampling and monitoring of supply wells.
- 4.) Cooperation and compliance with State operated agencies such as the Department of Natural Resources

Funding

Funding for the water CIP program is a combination of revenue bonds and enterprise revenue. In general, an attempt is made to balance funding between these two sources, with more reliance on bond funding when undertaking projects lasting a long period of time. Staff has evaluated the capital plan to place a higher emphasis on production and storage upgrades during the next several years. A ballot issue was approved by voters in August 2018 These revenue bonds will provide funding for numerous identified projects for the period FY 2019 - FY 2023. Enterprise revenue and prior year appropriations will provide funding for other CIP projects in FY 2019.

Electric Capital Projects

Planning

The Capital Improvements Plan (CIP) Budget is updated annually. The CIP is a multi-year plan for capital expansion and replacement of aging facilities and infrastructure. As part of CIP preparation, the electric system is evaluated for adequacy and replacement requirements. The engineering staff of the electric utility develops recommendations for the CIP after consultation with the electric distribution and electric production staff. These recommendations then go through a review process that includes the Director of Water & Light, the City Manager, the Columbia Water & Light Advisory Board (a citizen advisory board), and finally the Columbia City Council.

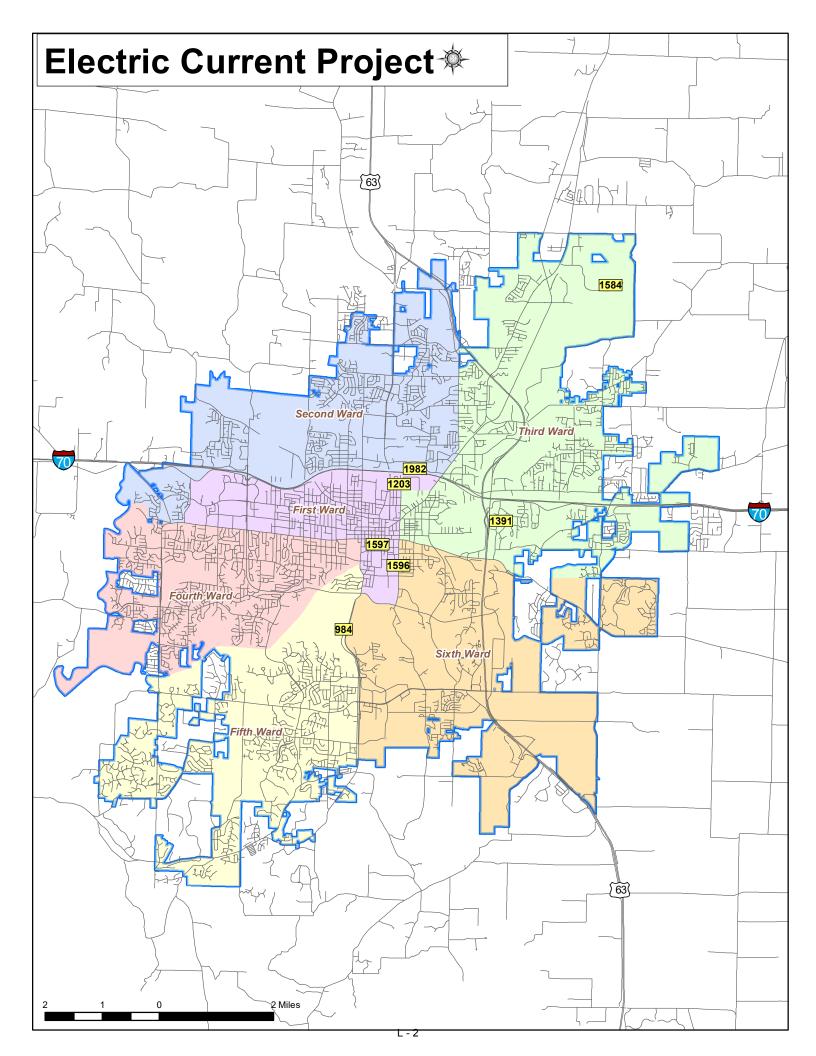

Various evaluation tools are utilized to make the recommendations outlined in the annual CIP. This includes evaluation of circuit loading after system peak; evaluation of customer growth patterns; communication with inter-connected systems; and, evaluation of the need to upgrade lower voltage lines and/or replace older lines due to a history of faults.

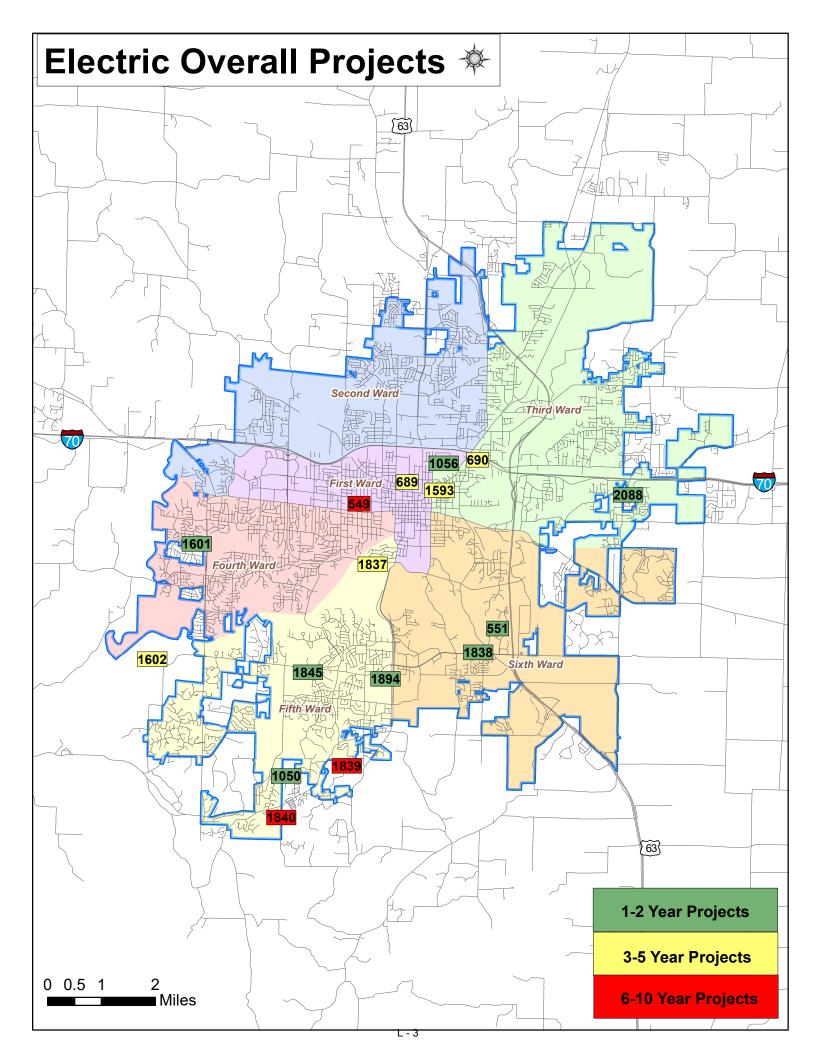

In addition, an active preventive maintenance program is in place that can identify problem areas that may require inclusion in the CIP. This includes:

- 1.) Formal monthly inspections of electric substations.
- 2.) Periodic oil testing of distribution transformers and other major equipment.
- 3.) Infra-red scans of electric substations every six months.
- 4.) Infra-red scans of transformers at large industrial customers annually.
- 5.) Eleven tree-trimming crews to maintain clearances on overhead lines.

Funding

Funding for the electric CIP program is a combination of revenue bonds and enterprise revenue. This will vary based on the size and timing of projects. The last multi-year revenue bond was passed by voters in 2015. Funds from the initial sale of bonds were appropriated to projects in FY 2015 and FY 2016. Some major projects that were intended to be funded with the first sale of bonds have been postponed for further review.. Rather than selling the remainder of the bonds authorized by voters, funds will be moved from these projects to projects that were initially intended to be funded by the second sale of bonds. Subsequently funds will be moved back to the initial projects when the projects move forward and the second bond sale occurs. Funding for several annual projects will come from enterprise revenue.

10/03/18 Plans have been submitted for the widening of Nifong Blvd between Providence Road and Willowcreek Lane. Existing overhead 13.8KV distribution lines on Nifong in the vicinity of Bethel and Forum Blvd are affected by the proposed widening and will need to be relocated. The road project may happen in FY19. A source of funding for the 13.8KV electric relocation work in support of the Nifong widening needs to be identified.

Sanitary Sewer Utility Capital Projects

Planning

The Capital Improvements Plan (CIP) Budget is updated annually. The CIP is a multi-year plan for expansion and rehabilitation/replacement of sanitary sewer collection and treatment facilities. As part of preparing the CIP, the sanitary sewer collection and treatment facilities are evaluated for adequacy and replacement requirements. The City Utilities Director and Sewer Utility staff develop recommendations for the CIP. These recommendations are then reviewed by the City Manager and the Columbia City Council.

Various evaluation tools are utilized to make the recommendations outlined in the annual CIP. These include petitions requesting private common collector elimination and sewer district projects, the Sewer Utility Master Plan, modeling the sanitary sewer collection system to evaluate existing system capacity; the impact of proposed development and determination of when collection system improvements are necessary; evaluation of customer growth patterns; communication with the Boone County Regional Sewer District regarding inter-connected systems, and the evaluation of the Columbia Regional Wastewater Treatment Plant facility needs.

In 2016 the City Council approved development of the Integrated Management Plan (IMP) for the Sewer and Storm Water Utilities. The goal of the IMP is to develop an adaptable and affordable long-term plan that addresses the City's wastewater and stormwater management needs and meets Clean Water Act requirements. The IMP will be finalized and presented to Council for approval and adoption in FY 2019. If approved by Council, Sewer Utility staff will begin the implementation of the recommendations presented in the IMP in FY 2019 and utilize these recommendations to inform future Sewer Utility CIP budgets beginning in FY 2020.

Currently, an active preventive maintenance program is in place to identify problem areas that may require inclusion in the CIP. This program includes:

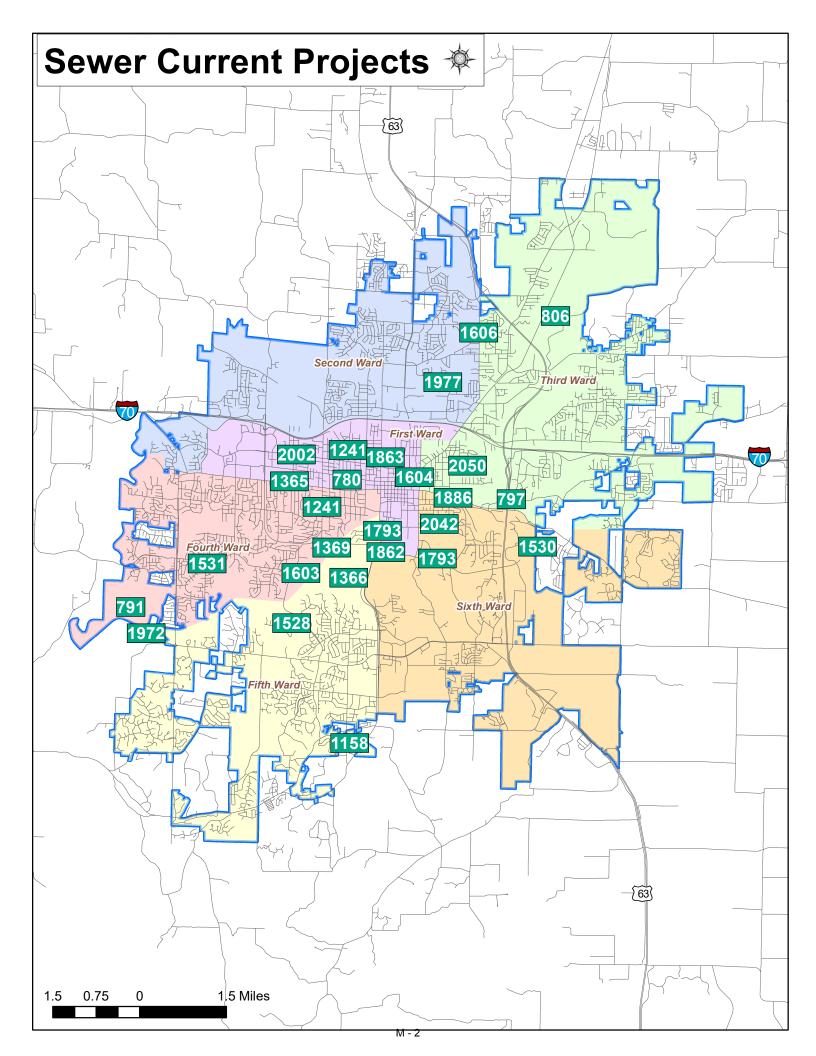

- 1. Annual inspection of trunk sewers along major creeks to identify any creek bank erosion problems that could affect the sanitary sewer collection system.
- 2. Manhole inspection program to identify sewer manholes that need to be repaired or replaced.
- 3. Internal television inspection of sanitary sewers to identify lines that need to be rehabilitated or replaced.

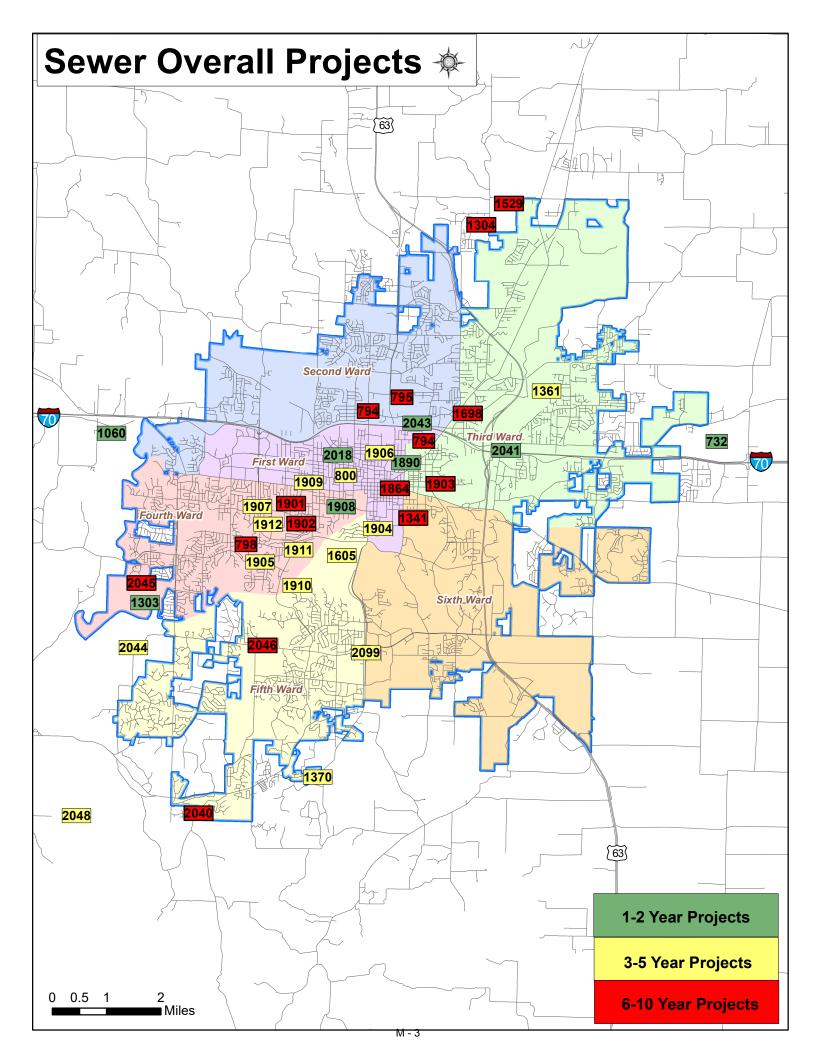

Funding

Funding for the sanitary sewer utility CIP program is a combination of revenue bonds and enterprise revenue.

On April 8, 2008, Columbia voters approved a \$77 million ballot issue for the purpose of improving the city's sewer system. These improvements included upgrades at the wastewater treatment plant and collection system improvements. The final project from these bonds was the Upper Hinkson Outfall Extension, which was constructed in FY2018.

In FY 2013, Columbia voters approved a \$32 million ballot issue for the primary purpose of rehabilitating the existing sewer collection system to address inflow and infiltration. This ballot issue also included funding for elimination of private common collector sewers, sewer extension improvements and digester improvements at the Columbia Regional Wastewater Treatment Plant. A cost of service study was conducted in 2014 to determine rates required to sustain and expand the sewer division as the city grows and industry standards and regulations evolve.

Solid Waste Utility Capital Projects

Planning

The multi-year Capital Improvement Plan (CIP) budget is updated annually. Collections, Recovery and Disposal functions of the utility require facility expansions periodically to account for collections, administrative, material recovery and disposal space needs as well as regulatory compliance requirements. Evaluation for CIP needs is influenced by the quantity of material collected for disposal and recovery, the volume of space available for disposal, and the age/condition of existing facilities.

The Solid Waste Management Master Visioning Plan was developed in summer 2008 to outline direction for the future. The plan was updated in 2011 and again in 2015. The visioning plan includes types of collection, equipment, landfill and material recovery programs. A cost of service study was conducted in 2014-2015 to determine rates required to sustain and expand the utility as the City grows and industry standards and regulations evolve.

Bioreactor Landfill Cell #6 is under construction and is anticipated to be complete in August of 2018. Bioreactor Landfill Cell #6 is the last disposal cell that can be constructed within the permitted airspace. The existing permitted landfill disposal area has approximately 13 year of remaining capacity. A Master Plan for the Landfill site is currently under way to layout how the City's Landfill property can be utilized for future disposal purposes. Once this Master Plan effort is complete, the utility can begin the multi-year regulatory permitting process for additional disposal space.

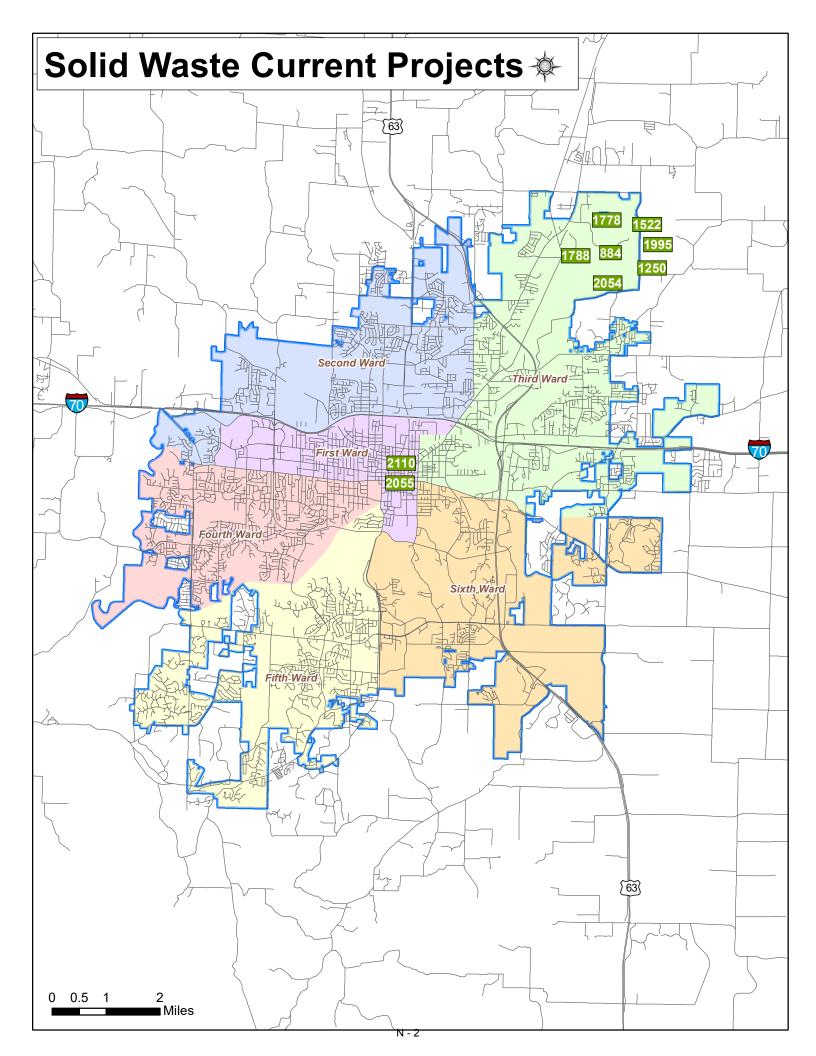

An increase in recycling quantities and improved material market development over time justifies expansion of the Material Recovery Facility. A comprehensive waste diversion evaluation is planned for 2018-2019 to evaluate the most feasible recycling collection and material recovery processing system would be for Columbia.

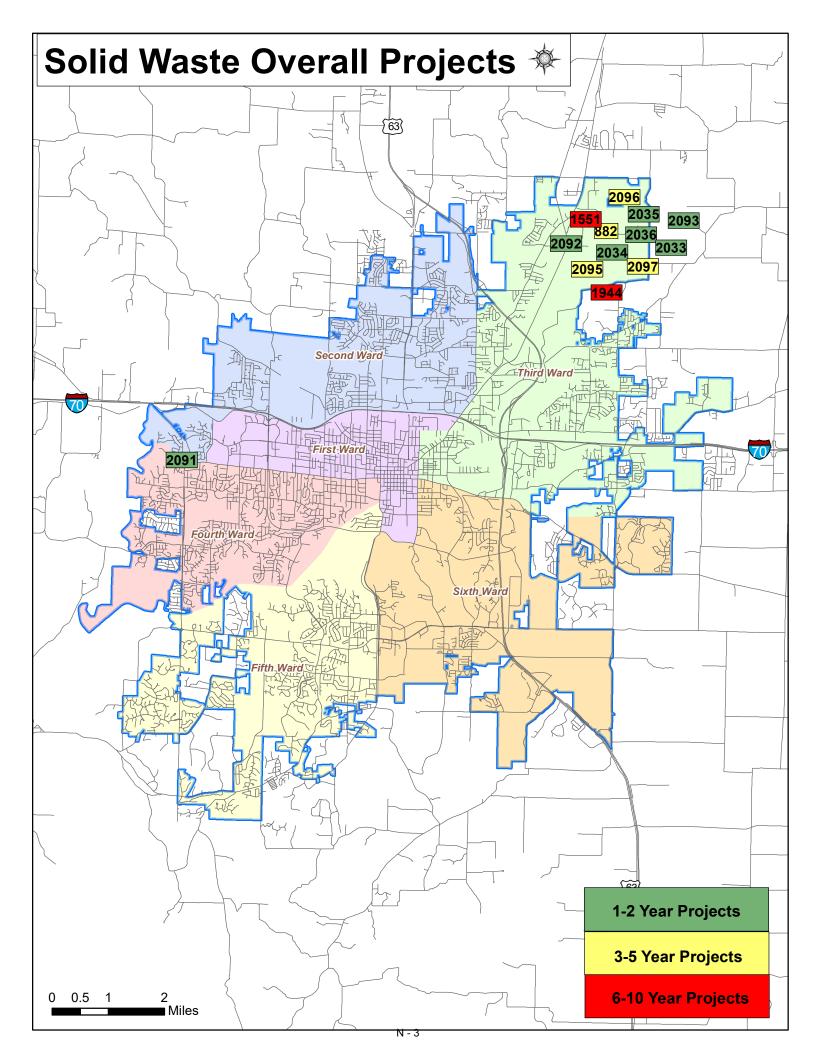

As food waste collection grows and additional composting opportunities arise, expansion of the compost facility and/or remote mulch sites may be required. Other items may be required or deemed economically justifiable to provide additional capacity or improve efficiency of operations.

Due to substantial growth in Solid Waste operations over the past 45 years, the Administration and Collections staff and equipment was relocated to the Landfill in 2017.

Funding

Funding is primarily derived from enterprise revenue. In addition, since the early 1990's the City has taken advantage of available grant funding to expand recovery efforts (recycling, composting, waste minimization).

Storm Water Utility Capital Projects

Planning

The Capital Improvement Plan (CIP) Budget is updated annually. The CIP is a plan for the reconstruction, replacement and upgrade of existing infrastructure to address flooding and failing stormwater conveyance facilities. As part of preparing the CIP, stormwater systems are evaluated for adequacy and replacement requirements. Staff develops recommendations for the CIP based on review of citizen's complaints and consultation with operations staff. These recommendations then go through a review process that includes the Director of City Utilities, the City Manager, and finally the Columbia City Council.

Various tools are utilized to make recommendations outlined in the annual CIP. These include evaluation of development, annexations, and growth patterns, review of communications with citizens, and analysis of needs for upgrading smaller size infrastructure and/or replacing older lines due to a history of storm water problems or deterioration of the facilities.

n 2016 the City Council approved development of the Integrated Management Plan (IMP) for the Sewer and Storm Water Utilities. The goal of the IMP is to develop an adaptable and affordable long-term plan that addresses the City's wastewater and stormwater management needs and meets Clean Water Act requirements. The IMP will be finalized and presented to Council for approval and adoption in FY 2019. If approved by Council, Storm Water utility staff will begin the implementation of the recommendations presented in the IMP in FY 2019 and utilize these recommendations to inform future Storm Water utility CIP budgets beginning in FY 2020.

Currently, an active preventive maintenance program is in place to identify problem areas that may require inclusion in the CIP. This program includes:

- 1. Annual inspections of storm water detention facilities
- 2. Inspection of storm water systems.
- 3. Cooperation and compliance with State operated agencies such as the Missouri Department of Natural Resources

Funding

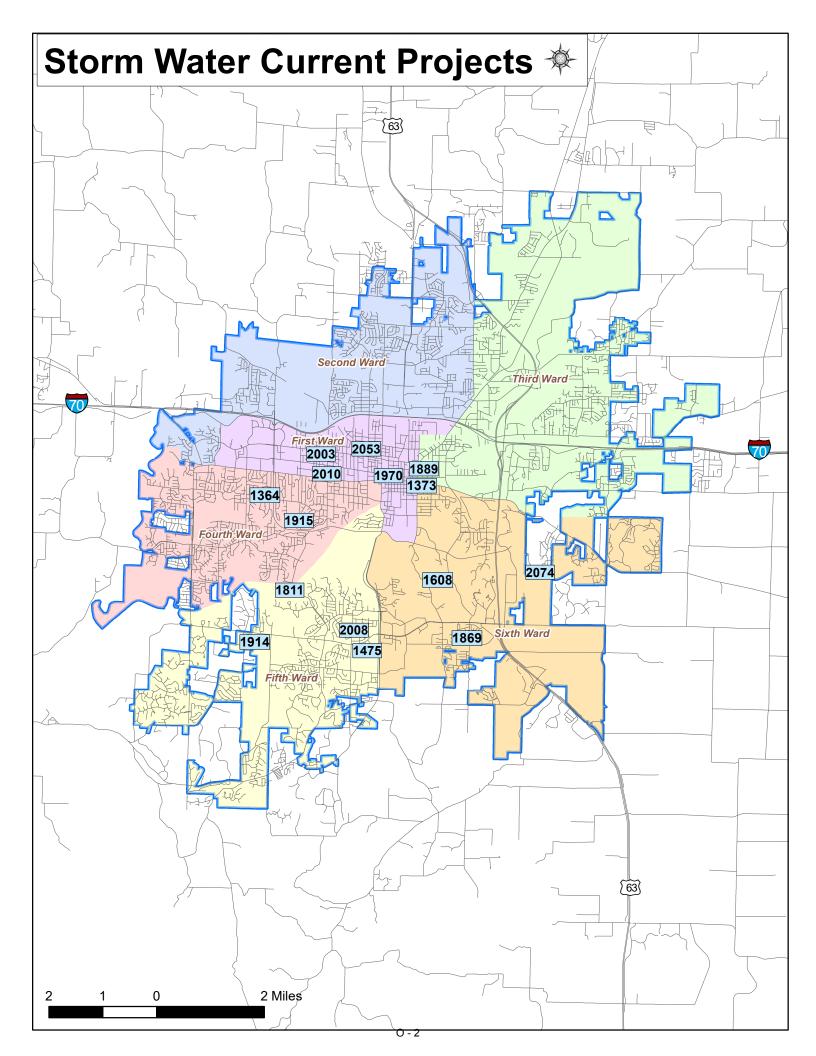

Funding for the storm water CIP program is by enterprise revenue approved by voters in 1991. The City also continues to look for grant opportunities to support this capital plan.

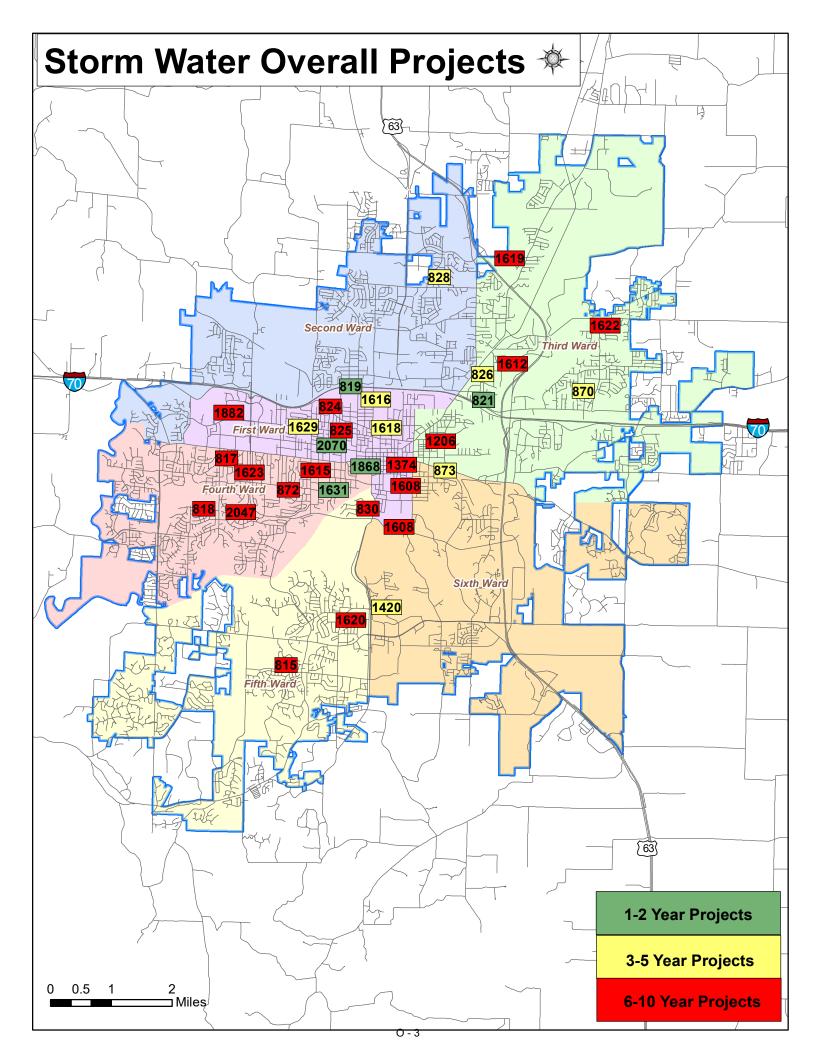

CH2M HILL, an outside consulting firm, completed an engineering study of the City's Storm Water Utility and CIP program in 2008. This study determined the Storm Water Utility's rate structure at that time was not generating sufficient revenues to adequately support the Storm Water CIP program.

n 2011, ERC Inc, another outside consulting firm, completed a cost of service study for the Storm Water Utility, recommending a rate structure and business plan to address revenue needs.

A cost of service study was conducted in 2014 to determine rates required to sustain and expand the division as the city grows and industry standards and regulations evolve.

A ballot issue was approved by voters in the April 2015. The approval of the ballot issue allows the Storm Water Utility rates to be increased over a five year period. The first incremental increase was approved with the FY2016 budget. These increases provide additional funding to increase maintenance and replacement of existing stormwater infrastructure and allows for completion of some projects currently identified in the CIP.
